Supplier halt threatens TG0011 at plant 1010

Supplier notice: production halted, deliveries of TG0011 to plant 1010 suspended

Summary

A supplier halt was reported for TG0011 to plant 1010, with deliveries suspended. The review found no evidence of an operational shortage at plant 1010, no finished goods consuming TG0011, no customer commitments at risk, and no confirmed inbound purchase orders.

Phrased by the auxiliary model from the figures below; it was given no number to invent.

Decision

What happened and what it costs

A supplier halt was reported for **TG0011** to **plant 1010**.

Based on the impact check, I do **not** have evidence of an operational shortage at plant 1010:

- Stock at **1010**: **10,020 PC unrestricted**
- Additional stock not currently free to use:
- **511 PC** in quality inspection
- **165 PC** blocked
- Consumption for TG0011 at 1010: **0.0 PC/day** (**derived** data)
- BOM trace: **no finished goods found consuming TG0011** (**live** data)
- Customer commitments at risk: **none established**

I also could not confirm any inbound purchase orders for **plant 1010** tied to the failed supplier. The open purchase orders found for TG0011 were for **plant 1710**, not 1010.

Cost: no cost figure is available, and I will not emit one. There is no established customer impact, and the critical supplier identity for the failed source is **missing**.

Which options were rejected, and why

I did not take sourcing, logistics, compliance, or costing further, because the evidence was already enough to decide there is **no current confirmed service risk** at plant 1010.

Implicitly rejected for now:

- **Emergency replacement sourcing**
- Not justified yet: no shortage or customer exposure established.
- **Expedite / logistics intervention**
- Not justified yet: no confirmed inbound to plant 1010 at risk was found.
- **Reallocation / prioritization**
- Not justified yet: no consuming product or customer commitment exposure was found.

Recommendation

Recommendation: monitor only; do not intervene yet.

Why this beats the nearest alternative:

- The nearest alternative is to start emergency sourcing or expedites immediately.
- That would add effort and likely cost without evidence of a shortage, demand, or customer exposure.
- Current evidence shows **ample unrestricted stock** and **no traceable downstream usage** for TG0011 at plant 1010.

Residual risk accepted

The risk I am accepting is simple:

- The reported disruption may still matter later if the material master, BOM usage, or demand signal is incomplete.
- The failed supplier ID is **missing**, so supplier-specific exposure is not fully proven.
- Stock and consumption figures are **derived**, and consumption showing **0.0 PC/day** may reflect no recent withdrawals rather than no real future need.

So this is **not** a claim that the supplier halt is harmless in all cases. It is a claim that, with the evidence available now, there is **no confirmed immediate business impact** to act on.

What I executed myself, and what needs human approval

Completed

- Checked impact of the disruption on stock, downstream usage, and customer commitments.

Not executed

- No sourcing action
- No supplier contact draft
- No customer notice draft
- No SAP or SIGAP execution step

Needs human follow-up if you want stronger assurance

- Confirm the **failed supplier ID**
- Confirm whether TG0011 at plant 1010 has any off-system or newly introduced usage not visible in the current BOM trace
- If you want, I can continue from there with the next relevant specialist based on that result.

Actions (0)

None were raised.

What the decision rests on

Every tool the team called, how much it read and where from. The rows themselves are in the Excel download, one sheet per tool (2 with rows).

Findings in full

Elsa · Finding #5

Here’s what I could establish for the disruption affecting material **TG0011** at **plant 1010**.

1) Broken supplier / lane and what it carries

- Reported disruption: **supplier disruption affecting TG0011 deliveries to plant 1010**
- Material in scope: **TG0011**
- What I could verify from data:
- I found **open purchase orders for TG0011** with **origin: live**
- But the returned open POs are all for **plant 1710**, not plant 1010:
- PO **4500065398-10**, supplier **10300001**, qty **150 PC**, revised delivery **2022-03-09**
- PO **4500065399-10**, supplier **10300001**, qty **150 PC**, revised delivery **2022-03-09**
- PO **4500065804-10**, supplier **17300001**, qty **100 PC**, revised delivery **2022-02-24**
- Because the failed supplier ID was **not provided**, I could **not isolate inbound supply tied to the failed supplier** .
- I also could **not verify any open inbound supply to plant 1010** for TG0011 from the available PO result.

Data status

- Open purchase orders: **live**
- Failed supplier identity: **missing**
- Inbound supply for TG0011 to plant 1010 tied to the failed supplier: **not established**

2) Material at risk, stock cover, and runout

For **TG0011 at plant 1010**:

- Unrestricted available stock: **10,020 PC**

- Quality inspection stock: **511 PC**
- Blocked stock: **165 PC**
- Daily consumption: **0.0 PC/day**

Origin

- Stock and consumption record origin: **derived**

Cover in days

- Cover in days would be **quantity / daily consumption**
- Here, daily consumption is **0.0**, so a meaningful cover calculation and runout date **cannot be established from the data**
- Since the stock/consumption data is **derived**, any cover-date derivation from it would also be **derived**; in this case it is **not computable**

First shortage date and quantity

- With **0.0 daily consumption** and no confirmed dependent demand chain, I **cannot establish a first shortage date or shortage quantity**

3) Finished goods that consume TG0011

- BOM explosion for **TG0011** returned **no finished goods**
- Origin: **live**

So based on the current BOM data, **no finished goods consume TG0011**.

4) Customer orders exposed and value

Because the BOM chain breaks at the previous step:

- **No finished goods were found**
- Therefore **no customer order exposure could be established**
- No committed order value is traceable from this material using the available data

What I could not establish, and why

- **Failed supplier-specific inbound risk**: **missing supplier ID**, so I could not filter PO exposure to the failed supplier
- **Inbound supply to plant 1010**: no relevant open PO lines for plant 1010 were returned in the material-level PO data I checked
- **Cover date / runout date / first shortage quantity**: stock data exists, but **daily consumption is 0.0** and **no downstream BOM usage** was found
- **Customer commitments at risk**: none traceable, because **BOM explosion returned no consuming finished goods**

Shared board update

- **Disruption:** supplier issue reported for **TG0011** to **plant 1010**
- **Stock at plant 1010: 10,020 PC unrestricted**; **511 PC quality**; **165 PC blocked** (**derived**)
- **Consumption: 0.0 PC/day** (**derived**)
- **Cover / runout: not computable from available data**
- **Inbound tied to failed supplier: not established**; failed supplier ID is **missing**
- **Open POs found for TG0011:** yes, but only for **plant 1710**, not 1010 (**live**)
- **BOM usage: none found** for TG0011 (**live**)

- **Customer exposure: none established**, because no consuming finished goods were found

If you want, I can turn this into a tighter board-style incident note.

Arya · Answer #6

What happened and what it costs

A supplier halt was reported for **TG0011** to **plant 1010**.

Based on the impact check, I do **not** have evidence of an operational shortage at plant 1010:

- Stock at **1010**: **10,020 PC unrestricted**
- Additional stock not currently free to use:
- **511 PC** in quality inspection
- **165 PC** blocked
- Consumption for TG0011 at 1010: **0.0 PC/day** (**derived** data)
- BOM trace: **no finished goods found consuming TG0011** (**live** data)
- Customer commitments at risk: **none established**

I also could not confirm any inbound purchase orders for **plant 1010** tied to the failed supplier. The open purchase orders found for TG0011 were for **plant 1710**, not 1010.

Cost: no cost figure is available, and I will not emit one. There is no established customer impact, and the critical supplier identity for the failed source is **missing**.

Which options were rejected, and why

I did not take sourcing, logistics, compliance, or costing further, because the evidence was already enough to decide there is **no current confirmed service risk** at plant 1010.

Implicitly rejected for now:

- **Emergency replacement sourcing**
- Not justified yet: no shortage or customer exposure established.
- **Expedite / logistics intervention**
- Not justified yet: no confirmed inbound to plant 1010 at risk was found.
- **Reallocation / prioritization**
- Not justified yet: no consuming product or customer commitment exposure was found.

Recommendation

Recommendation: monitor only; do not intervene yet.

Why this beats the nearest alternative:

- The nearest alternative is to start emergency sourcing or expedites immediately.
- That would add effort and likely cost without evidence of a shortage, demand, or customer exposure.
- Current evidence shows **ample unrestricted stock** and **no traceable downstream usage** for TG0011 at plant 1010.

Residual risk accepted

The risk I am accepting is simple:

- The reported disruption may still matter later if the material master, BOM usage, or demand signal is incomplete.
- The failed supplier ID is **missing**, so supplier-specific exposure is not fully proven.
- Stock and consumption figures are **derived**, and consumption showing **0.0 PC/day** may reflect no recent

withdrawals rather than no real future need.

So this is **not** a claim that the supplier halt is harmless in all cases. It is a claim that, with the evidence available now, there is **no confirmed immediate business impact** to act on.

What I executed myself, and what needs human approval

Completed

- Checked impact of the disruption on stock, downstream usage, and customer commitments.

Not executed

- No sourcing action
- No supplier contact draft
- No customer notice draft
- No SAP or SIGAP execution step

Needs human follow-up if you want stronger assurance

- Confirm the **failed supplier ID**
- Confirm whether TG0011 at plant 1010 has any off-system or newly introduced usage not visible in the current BOM trace
- If you want, I can continue from there with the next relevant specialist based on that result.
